

# MINI SWING PISTON COMPRESSORS AND VACUUM PUMPS FOR AIR

# **DATA SHEET E303**

NPK 04 ... DC

NPK 04 ... DCB

## Concept

The Swing Piston Pumps from KNF are based on a simple principal: As it rises and falls the piston tilts first to one side, then the other. The compression forces act along the axis of the connecting rod, so that there is no component of force acting against the cylinder wall to cause wear. Thanks to the sealing lip on the piston seal the swing piston pump runs dry, and 100% oil-free. They will evacuate, transfer and compress air without contamination.

For customers wih unusual requirements the KNF Project Team produces specially tailored solutions. Use our experience to your advantage and talk to our applications engineers.

### **Features**

#### Uncontaminated flow

No contamination of the air due to oil-free operation

Maintenance-free

High level of flow-rate

Excellent price performance ratio

Very quiet and little vibration

Ready for installation

Can operate in any installed posi-

### Areas of use

The Mini Swing Piston Pumps offer a high level of performance despite their small size, as well as an excellent price performance ratio. They are used especially in the fields of medicine, environmental and production technology.

These pumps are used for transferring, compressing and evacuation air, taking samples, evacuating vessels and compressing air in process systems and vessels.

PERFORMANCE DATA					
Туре	Delivery (I/min)	Vacuum (mbar absolute)	atm. Press.	Pressure (bar g)	Weight (g)
NPK 04 Vacuum DC	3.3	300			200
NPK 04 Pressure DC	3.3			1.0	200
NPK 04 Vacuum DCB	3.3	300			280
NPK 04 Pressure DCB	3.3			1.0	280

#### PERFORMANCE DATA

-			
Type	Delivery	Max. operating	Ultimate
Order code 2)	at atm. pressure	pressure	vacuum
	(I/min) 1)	(bar g)	(mbar abs.)
NPK 04 Vacuum DC	3.3	-	300
NPK 04 Pressure DC	3.3	1.0	-

<sup>1)</sup> Litre at STP

#### MOTOR DATA

DC motor	12 V	24 V

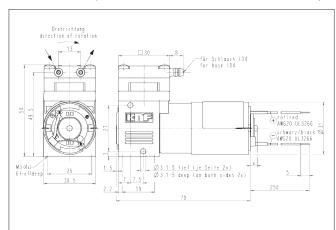

#### PERFORMANCE DATA (Version with brushless dc motor)

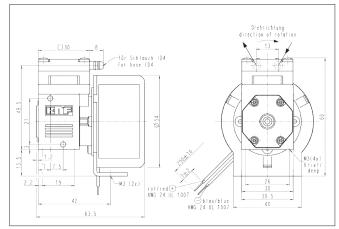

Type Order code <sup>2)</sup>	Delivery at atm. pressure (I/min) 1)	Max. operating pressure (bar)	Ultimate vacuum (mbar abs.)
NPK 04 Vacuum DCB	3.3	=	300
NPK 04 Pressure DCB	3.3	1.0	-

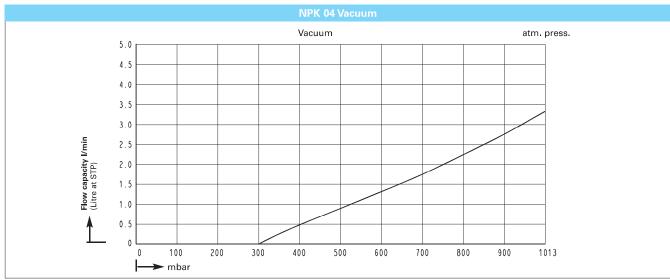

#### MOTOR DATA (Version with brushless dc motor)

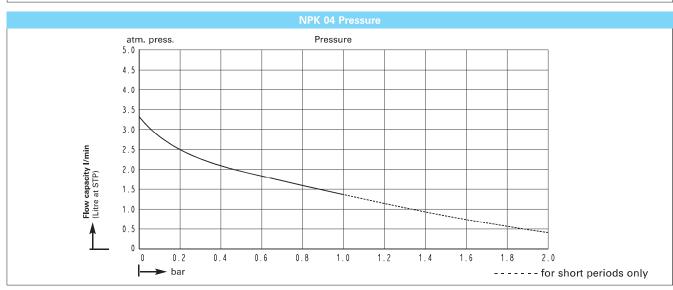

DC motor	12 V	24 V	

Dimensions mm (All dimensional tolerances conform to DIN ISO 2768-1, Tolerance Class V)

# **TECHNICAL INFORMATIONS**

# MODEL CODE FOR EASY ORDERING

The model code is identical to the order number. It is made up as follows:

In addition the motor data must be given in the purchase order. In our extensive program you are sure to find the pump

you need for your particular application.

Accessories			
Description	Order No.	Details	
Silencer/Filter	024805		

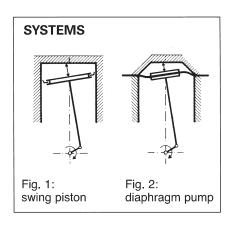

Hints on function and installation: see back side

# HINTS ON FUNCTION AND INSTALLATION

### FUNCTION OF KNF SWING PISTON VACUUM PUMPS AND COMPRESSORS

As it rises and falls the piston tilts first to one side, then the other (see figure 1). Just as with the diaphragm pump, the compression forces act along the axis of the connecting rod, so that there is no component of force acting against the cylinder wall to cause wear. In contrast to the diaphragm pump (see figure 2), the swing piston pump has a sealing lip. Thanks to the sealing lip on the piston seal the swing piston pump runs dry, and 100% oil-free.

# HINTS ON INSTALLATION AND OPERATION

- Range of use: Transferring air at temperatures between + 5 °C and + 40 °C
- Permissible ambient temperature: between + 5 °C and + 40 °C
- The standard pumps are not suitable for use in areas where there is a risk of explosion. In these cases there are other products in the KNF program please ask us for details
- The pumps are not designed to start against pressure or vacuum; when a pump is switched on the pressure in the suction and pressure lines must be atmospheric. Pumps that start against pressure or vacuum are available on request
- To prevent the maximum operating pressure being exceeded, restriction or regulation of the air flow should only be carried out in the suction line

- Components connected to the pump must be designed to withstand the pneumatic performance of the pump
- Install the pump so that the fan can draw in sufficient cooling air
- Fit the pump at the highest point in the system, so that condensate cannot collect in the head of the pump that prolongs working-life.

If you have any questions, please call our application engineers (see below for contact telephone number).

KNF - the competent partner for vacuum and compressor technology. Especially for unusual problems.
